

## PathFindIR NIGHT VISION DRIVING SYSTEM

A thermal imager is a camera capable of detecting extremely small temperature differences. Converted into a real-time video image, displayed on a monitor, this video image is extremely well suited for night vision applications. This makes it the perfect tool to see in absolute darkness; to see during the darkest night.

### OPERATING LEASE

- 100% Tax deductible
- Update and upgrade
- Preserve cashflow
- No deposit required
